

Workshop in Methods

Beginning Text Analysis with R

Dr. Tassie Gniady

*Digital Humanities Cyberinfrastructure Manager
UTS Research Technologies*

R is an open source language for statistical programming and graphics. With libraries oriented towards text mining, and one even called *twitteR*, using R to analyze social and humanities data has gotten easier than ever. This workshop will introduce some basics of R and guide you through a scaffolded approach to learning R that includes written tutorials, online web apps, dynamic notebooks, and downloadable code. In this session we will generate basic word clouds and cluster dendrograms.

Friday, April 29, 2016, 2:30-4:30pm

Social Science Research Commons Grand Hall
Woodburn Hall 200
